ii) **Claim 51:**

Line 1, insert before "method", -- computerized --;

**iii) Replace claims 49, 55, 57 and 58:**

**Claim 49.** (Currently amended) A computerized method of operating a programming language, comprising:

defining equivalence annotations within the programming language which indicate to a program development system of the programming language information about sequential execution of statements written within the programming language, wherein said statements must be executed in a multithreaded manner associated with said annotations; and

developing the programming language as a sequential execution or as a substantially simultaneous execution based on contents of the equivalence annotations.

**Claim 55.** (Currently Amended) A computerized method of operating a program language, comprising:

defining equivalence annotations within a programming language which indicate to a program development system of the programming language information about sequential execution of statements written within the programming language, wherein the equivalence annotations

indicate that the statements are multithreadable and associated with said annotations; and

developing programs as a sequential execution or as a substantially simultaneous execution, based on contents of the equivalence annotations; and

synchronizing access of threads to shared memory using a specially defined synchronization;

synchronization counter;

wherein said synchronization counter is monotonically increasing, cannot be decreased, and prevents thread operation during its check operation.

**Claim 57.** (Currently Amended) A computerized method of operating a program language, comprising:

defining equivalence annotations within a programming language which indicate to a program development system of the programming language information about sequential execution of statements written within the programming language, wherein the equivalence annotations indicate that the statements are multithreadable and associated with said annotations;

developing programs as a sequential execution or as a substantially simultaneous execution, based on contents of the equivalence annotations; and

synchronizing access of threads to shared memory using a specially defined synchronization;

wherein said synchronization flag is monotonically increasing, cannot be decreased, and prevents thread operation during its check operation.

**Claim 58.** (Currently Amended) A computerized method of operating a program language, comprising:

defining equivalence annotations wherein the equivalence annotations indicate that statements are multithreadable and associated with said annotations within a programming language which indicate to a program development system of the programming language information about sequential execution of said statements written within the programming language;

developing programs as a sequential execution or as a substantially simultaneous execution based on contents of the equivalence annotations; and

synchronizing access of threads to shared memory using a specially defined synchronization;

wherein said synchronization counter includes a check operation which suspends a calling thread.
